

APPENDIX 1.1:

APPROVED TRAFFIC STUDY SCOPING AGREEMENT

This Page Intentionally Left Blank

June 29, 2021

Mr. Don Young
City of Redlands
35 Cajon Street
Redlands, CA 92373

SUBJECT: STATE STREET VILLAGE - REDLANDS TRAFFIC ANALYSIS SCOPING AGREEMENT

Dear Mr. Don Young:

The firm of Urban Crossroads, Inc. is pleased to provide this letter documenting the recommended scoping / assumptions for the proposed State Street Village - Redlands redevelopment (**Project**), which is bounded by Redlands Boulevard, Orange Street, Citrus Avenue, and Eureka Street in the City of Redlands. The project location with respect to the surrounding area is illustrated on Exhibit 1 and the preliminary site plan is illustrated on Exhibit 2.

Our goal is to obtain comments from City of Redlands staff to ensure that the traffic study fully addresses the potential deficiencies of the proposed Project. The remainder of this letter describes the proposed analysis methodology, project trip generation, trip distribution, and project traffic assignment/project trips on the surrounding roadway network, which has been used, along with inputs from City staff to establish the proposed project study area. It should be noted that this scoping agreement has been prepared in accordance with the County of San Bernardino Congestion Management Program (CMP) traffic study guidelines (Appendix B) and the City's Traffic Performance Criteria & Thresholds of Significance.

PROPOSED PROJECT

The site is occupied by the Redlands Mall, which is currently vacant, in conjunction with a CVS Pharmacy, Union Bank, and Denny's restaurant (which were operational at the time the driveway counts were conducted for existing uses). The mall site is proposed to be redeveloped with mixed-use buildings with housing over retail, restaurants, and other services. Specifically, the proposed uses include 723 multifamily residential units (within six 3 to 5 story buildings), and include live/work units with studio, one/two/three-bedroom plans. 39,000 square feet of retail space, 32,000 square feet of restaurant space, 12,222 square feet of office space, and a 2,200 square foot rooftop restaurant. A drug store of approximately 14,500 square feet with drive-through window for the pharmacy is planned for the outparcel site on the south side of Citrus Avenue.

The Project is anticipated to be built out and occupied by the year 2025. The preliminary site plan is illustrated on Exhibit 2. The Project would have access to all surrounding streets in conjunction to an

extension of Third Street and State Street, which will improve connectivity through the site. Third Street will provide pedestrian connectivity including a pedestrian connection to the Arrow Line train station.

VMT ANALYSIS

Changes to California Environmental Quality Act (CEQA) Guidelines were adopted in December 2018, which requires all lead agencies to adopt VMT as a replacement for automobile delay-based level of service (LOS) as the new measure for identifying transportation impacts for land use projects. This statewide mandate took effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a [Technical Advisory on Evaluating Transportation Impacts in CEQA](#) (December of 2018). The VMT analysis prepared for this Project will be in accordance with the City's VMT guidelines (adopted June 2020). The VMT analysis will be prepared as a separate document from the LOS-based traffic study. The Project meets the Transit Priority Area (TPA) screening criteria and would therefore be presumed to result in a less than significant VMT impact. Additional VMT analysis is not required. A VMT letter report (separate from the LOS-based traffic study) will be provided to summarize the VMT results.

TRIP GENERATION ASSUMPTIONS

As noted previously, the site is currently occupied by an existing CVS Pharmacy, Union Bank, and Denny's restaurant. As such, driveway counts were conducted on April 14, 2021, to capture the vehicle trips associated with the existing uses. Table 1 summarizes the peak hour and daily traffic counts collected at each driveway and also provides a sum for all existing uses.

TABLE 1: EXISTING TRIP GENERATION

Land Use	Redlands Mall ²						
	AM Peak Hour			PM Peak Hour			Daily
	In	Out	Total	In	Out	Total	
April 14, 2021							
Eureka North Driveway	1	2	3	0	7	7	122
Eureka South Driveway	2	0	2	6	0	6	118
Redlands West Driveway	10	4	14	44	13	57	539
Redlands East Driveway	3	5	8	7	16	23	347
Orange North Driveway	0	0	0	0	0	0	15
Orange South Driveway	27	12	39	61	75	136	1,503

Total Trips¹	57	31	88	156	163	319	3,718

¹ Trip generation represents the sum of all driveways.

Trip generation estimates for the proposed Project have been developed using data from the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition, 2017). The trip generation rates used to estimate Project traffic are summarized in Table 2.

TABLE 2: ITE TRIP GENERATION RATES

Land Use ¹	ITE Code	Units ²	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Multifamily Housing (Mid-Rise)	221	DU	0.09	0.27	0.36	0.27	0.17	0.44	5.44
Office	710	TSF	1.00	0.16	1.16	0.18	0.97	1.15	9.74
Shopping Center ³	820	TSF	2.65	1.63	4.28	3.31	3.58	6.89	80.51
Pharmacy/Drugstore w/Drive-Thru window	881	TSF	2.04	1.80	3.84	5.15	5.14	10.29	109.16
Quality Restaurant	931	TSF	0.37	0.36	0.73	5.23	2.57	7.80	83.84
High Turnover (Sit-Down) Restaurant	932	TSF	5.47	4.47	9.94	6.06	3.71	9.77	112.18
Fast-Food Restaurant without Drive-Through Window	933	TSF	15.06	10.04	25.10	14.17	14.17	28.34	346.23

¹ Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Tenth Edition (2017).

² DU = Dwelling Units; TSF = thousand square feet

³ Regression equation utilized to determine the trip generation rates as opposed to average trip rates.

Internal capture is a percentage reduction that can be applied to the trip generation estimates for individual land uses to account for trips internal to the site. In other words, trips may be made between individual retail uses on-site and can be made either by walking or using internal roadways without using external streets. For example, patrons of the retail may visit the restaurant uses or residents could visit retail/restaurant/office uses without leaving the site and are therefore considered as vehicle trips that are internal to the site. The internal capture rate for the retail, office, restaurant, and residential uses on-site are based on the NCHRP 684 Internal Trip Capture Estimation Tool.

Pass-by trips are defined as intermediate stops on the way from an origin to a primary trip destination without a route diversion. Pass-by trips are attracted from traffic passing the site on an adjacent street or roadway that offers direct access to the generator. These types of trips are many times associated with retail uses. As the Project is proposed to include retail and restaurant uses, pass-by percentages have been obtained and applied accordingly from the ITE Trip Generation Handbook, 3rd Edition (2017).

As shown on Table 3, the Project is anticipated to generate a net total of approximately 5,584 two-way trips per day with 770 AM peak hour trips and 536 PM peak hour trips.

TABLE 3: PROJECT TRIP GENERATION SUMMARY

Land Use	Quantity Units ¹	AM Peak Hour			PM Peak Hour			Daily
		In	Out	Total	In	Out	Total	
Residential Land Use

Project Buildout Total:		396	374	770	312	225	536	5,584

¹ DU = Dwelling Units; TSF = thousand square feet

Table 4 provides a comparison of the existing land use trip generation and the proposed Project trip generation estimates. The development of the proposed Project is anticipated to generate a net increase of 1,866 two-way trips per day with 682 AM peak hour trips and 217 PM peak hour trips in comparison to the existing uses.

TABLE 4: TRIP GENERATION COMPARISON

Land Use	AM Peak Hour			PM Peak Hour			Daily
	In	Out	Total	In	Out	Total	
Existing Land Uses ¹	57	31	88	156	163	319	3,718
Proposed Project	396	374	770	312	225	536	5,584
Variance	339	343	682	156	62	217	1,866

¹ Based on existing driveway counts observed for the existing land uses.

TRIP DISTRIBUTION ASSUMPTIONS

Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. The Project trip distribution was developed based on anticipated travel patterns to and from the Project site and developed based on an understanding of existing travel patterns in the area, the geographical location of the site, and the site's proximity to the regional arterial and state highway system. Exhibit 3 illustrates the Project's residential trip distribution patterns while the retail, restaurant, and office use trip distribution patterns are reflected on Exhibit 4.

PROPOSED STUDY AREA INTERSECTIONS

The Project is anticipated to contribute at least 50 peak hour trips to the following study area intersections (see Exhibit 1 and Table 5):

TABLE 5: STUDY AREA INTERSECTIONS

#	Intersection
1	Center St. & Brookside Av.
2	Eureka St. & Redlands Bl.
3	Eureka St. & Driveway 1 – Future Intersection
4	Eureka St. & State St.
5	Eureka St. & Driveway 2 – Future Intersection
6	Eureka St. & Citrus Av.
7	Eureka St. & Driveway 3 – Future Intersection
8	Driveway 4 & Citrus Av. – Future Intersection
9	3rd St. & Redlands Bl.

12	4th St. & Driveway 3 – Future Intersection
13	Driveway 6 & Redlands Bl. – Future Intersection
14	Orange St. & I-10 WB Ramps
15	Orange St. & Pearl Av.
16	Orange St. & Redlands Bl.
17	Orange St. & State St.
18	Orange St. & Driveway 7 – Future Intersection
19	Orange St. & Citrus Av.
20	Redlands Bl. & Citrus Av.
21	Church St. & Citrus Av.
22	University St. & Citrus Av.

In light of the current conditions, Urban Crossroads recommends that we either use historic data that we obtain from older traffic studies or use count data provided by the City. Traffic counts older than the

current year (2021) would be brought to current conditions through the application of a growth factor. The growth factor is recommended to be the average population, employment, and household growth per the RTP for the City of Redlands, which is 0.76%.

The adopted Southern California Association of Governments (SCAG) 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (September 2020) growth forecasts for the City of Redlands identifies projected growth in population of 69,500 in 2016 to 80,800 in 2045, or a 0.52% increase over the 29-year period. The change in population equates to roughly a 16.26% growth rate, compounded annually. Similarly, growth over the same 29-year period in households is projected to increase by 26.23%, or a 0.81% annual growth rate. Finally, growth in employment over the same 29-year period is projected to increase by 32.16%, or a 0.97% annual growth rate.

AMBIENT GROWTH ASSUMPTIONS

An ambient growth rate of 2% per year, compounded annually, is proposed for the study area intersections.

ANALYSIS SCENARIOS

Intersection analyses will be provided for AM and PM peak hours for the following analysis scenarios:

- Existing (2021) Conditions
- Opening Year Cumulative (2025) Without Project Conditions
- Opening Year Cumulative (2025) With Project Conditions
- Horizon Year (2040) Without Project
- Horizon Year (2040) With Project

METHODOLOGY

Intersection operations analysis will utilize the Highway Capacity Manual (6th Edition) to evaluate signalized and unsignalized intersections.

The California Manual on Uniform Traffic Control Devices (CA MUTCD) will be utilized to evaluate peak hour traffic signal warrants at the unsignalized study area intersections.

LEVEL OF SERVICE CRITERIA

The City of Redlands has established specific performance criteria for intersection operations. These performance criteria include standards related to determining the project deficiencies on the roadway system. The City of Redlands has established LOS C as the minimum level of service for its intersections. Therefore, any intersection operating at LOS D or worse will be considered deficient for the purposes of this analysis. Additionally, General Plan Policy 5.20c from the Redlands General Plan states that: Where

the current level of service at a location within the City of Redlands is below the Level of Service (LOS) C standard, no development project shall be approved that cannot be mitigated so that it does not reduce the existing level of service at that location (i.e. intersections in Redlands that are deficient to start out with are acceptable as long as they do not further degrade LOS) except as provided in Section 5.20b.

General Plan Policy 5.20b of Measure U states that within the area identified in GP Figure 5-1, including the “donut hole”, maintain LOS C or better, however, accept a reduced LOS on a case-by-case basis upon approval by a four-fifths (4/5ths) vote of the total authorized membership of the City Council.

DEFICIENCY THRESHOLDS

The following thresholds will be utilized to determine whether the addition of Project traffic at a study intersection results in a project-related deficiency:

- A project deficiency occurs at a study intersection if the addition of project-generated trips reduces the peak hour level of service of the study intersection to change from acceptable operation (e.g., LOS A, B or C) to deficient operation (e.g., LOS D, E or F) and, if applicable, also causes an unsignalized intersection to satisfy a Caltrans traffic signal warrant; or
- A project deficiency occurs at a study intersection if the addition of project-generated trips worsens the pre-project level of service grade at a deficiently operating (e.g., LOS D, E or F) intersection and, if applicable, also causes an unsignalized intersection to satisfy a Caltrans traffic signal warrant.

Per 5.20c of Measure U, where the current LOS at a location within the City of Redlands is below the LOS C standard, no development project shall be approved that cannot be mitigated so that it does not reduce the existing LOS at that location except as provided in Section 5.20b.

CUMULATIVE DEVELOPMENTS

It is requested that the City of Redlands provide Urban Crossroads with cumulative development projects to be included in the traffic study for cumulative traffic conditions.

SPECIAL ISSUES

The following special issues will also be addressed as part of the traffic analysis:

- Conduct a queuing analysis at Project access points to determine adequate turn pocket storage to accommodate 95th percentile queues.
- Conduct traffic signal warrant analysis for all existing and future unsignalized study area intersections. Unsignalized intersections with restricted access will not be evaluated for signal warrants as they are not suitable locations for signalization.
- Conduct a comparison between the prior use (i.e., fully occupied Redlands Mall) and proposed Project. The comparison will include a land use and trip generation discussion.

Mr. Don Young
City of Redlands
June 29, 2021
Page 8 of 8

- A qualitative discussion of pedestrian enhancements, bike lanes, pop-outs, functionality of proposed loading zones, etc. will be discussed in the Traffic Study for the site adjacent roadways/intersections.
- LOS-based Traffic Study and VMT Analysis will be provided under separate cover.

Please provide your approval or comments finalizing the study area and analysis assumptions. If you have any questions or comments, I can be reached at (949) 861-0177.

Change Period (Y+Rc), s	4.6	4.6	4.6	* 4.7	4.6	4.6	4.6	* 4.7				
Max Green Setting (Gmax), s	16.4	30.4	9.4	* 45	9.6	37.2	21.6	* 33				
Max Q Clear Time (g_c+l1), s	10.1	17.1	6.1	27.2	4.5	14.9	13.7	15.2				
Green Ext Time (p_c), s	0.1	3.3	0.0	7.0	0.0	3.8	0.2	3.3				

Intersection Summary

HCM 6th Ctrl Delay	32.0
HCM 6th LOS	C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
